I. IN THE CLAIMS

1. (original)   Server (7) for offering an internet portal comprising a menu (100) comprising menu-items (110, 120, 130, 140, 150) to a mobile terminal (1) comprising

- a transmitting module (75) for transmitting a portal signal to said terminal, which portal signal

5 comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module (74) for receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item,

10 wherein at least some of said menu-items each are linked to at least two sub-menu-items (111-115, 121-127, 131-139, 141-146, 151-155), with said server comprising

- a generating module (76) for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each

15 for displaying at least a part of a sub-menu-item of a second menu-item on said display, with at least most of said sub-menu-items (111-115) of said first menu-item (110) being personalized, and with at least most of said sub-menu-items (121-127) of said second menu-item (120) being non-personalized.

20 2. (original)   Server according to claim 1, wherein said server comprises

- an addressing module (77) for, in response to a receival from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item, addressing a service provider for coupling said terminal to said service provider.

2

3.   (currently amended)   Server according to claim 1 or 2, wherein server comprises

- a supplying module (78) for, in response to a receival from said terminal of a further activation

signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item (130),

5   supplying time-dependent information stored in said server from said server to said terminal.

4.   (new)   Server according to claim 2, wherein server comprises

- a supplying module (78) for, in response to a receival from said terminal of a further activation

signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item (130),

10   supplying time-dependent information stored in said server from said server to said terminal.

4. 5.   (currently amended)   Server according to claim 1, 2, or 3, wherein said server comprises

- an adjusting module (73) for, in response to a receival from said terminal of a further

activation signal comprising a sub-menu-item of a fourth menu-item (140), allowing adjustment

15   of user-dependent information stored in said server in dependence of a receival of an adjustment

signal originating from said terminal.

6.   (new)   Server according to claim 2, wherein said server comprises

- an adjusting module (73) for, in response to a receival from said terminal of a further

20   activation signal comprising a sub-menu-item of a fourth menu-item (140), allowing adjustment

of user-dependent information stored in said server in dependence of a receival of an adjustment

signal originating from said terminal.

3

7.   (new) Server according to claim 3, wherein said server comprises

- an adjusting module (73) for, in response to a receival from said terminal of a further

activation signal comprising a sub-menu-item of a fourth menu-item (140), allowing adjustment

of user-dependent information stored in said server in dependence of a receival of an adjustment

5   signal originating from said terminal.

5. 8.   (currently amended) Server according to claim 1, 2, 3, or 4, wherein five menu-items

offer time-dependent information (130), personalized services (110), non-personalized services

(120), adjustment of user-dependent information (140) and help (150), in this particular order on

10   said display.

9.   (new) Server according to claim 2, wherein five menu-items offer time-dependent

information (130), personalized services (110), non-personalized services (120), adjustment of

user-dependent information (140) and help (150), in this particular order on said display.

15

10.   (new) Server according to claim 3, wherein five menu-items offer time-dependent

information (130), personalized services (110), non-personalized services (120), adjustment of

user-dependent information (140) and help (150), in this particular order on said display.

20   11.   (new) Server according to claim 4, wherein five menu-items offer time-dependent

information (130), personalized services (110), non-personalized services (120), adjustment of

user-dependent information (140) and help (150), in this particular order on said display.

4

6. 12. (previously presented)Access provider (5) comprising a network-unit (6) coupled to a server (7) for offering an internet portal comprising a menu (100) comprising menu-items (110, 120, 130, 140, 150) to a mobile terminal (1) and comprising

- a transmitting module (75) for transmitting a portal signal to said terminal via said network-

5 unit, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module (74) for receiving an activation signal from said terminal via said network-unit for activation a menu-item, which activation signal comprises a menu-item code defining a

10 menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items (111-115, 121-127, 131-139, 141-146, 151-155), with said server comprising

- a generating module (76) for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a first menu-item on said

15 display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a second menu-item on said display, with at least most of said sub-menu-items (111-115) of said first menu-item (110) being personalized, and with a least most of said sub-menu-items (121-127) of said second menu-item (120) being non-personalized.

20

7. 13. (currently amended) Access provider according to claim 6 12, wherein said access provider comprises

- an addressing module (77) for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-item code defining a sub-menu-item, addressing a service provider for coupling said terminal to said service provider via said network-unit.

8. 14. (currently amended)   Access provider according to claim 6 or 7 12, wherein said access provider comprises

- a supplying module (78) for, in response to a receival from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item (130), supplying time-dependent information stored in said server from said server to said terminal via said network-unit.

15.   (new) Access provider according to claim 13, wherein said access provider comprises

- a supplying module (78) for, in response to a receival from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item (130), supplying time-dependent information stored in said server from said server to said terminal via said network-unit.

9. 16. (currently amended)   Access provider according to claim 6, 7, or 8 12, wherein said access provider comprises

- an adjusting module (73) for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item (140), allowing adjustment of user-dependent information stored in said server

6

in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

17. (new) Access provider according to claim 13, wherein said access provider comprises

- an adjusting module (73) for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item (140), allowing adjustment of user-dependent information stored in said server in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

18. (new) Access provider according to claim 14, wherein said access provider comprises

- an adjusting module (73) for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item (140), allowing adjustment of user-dependent information stored in said server in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

~~10.~~ 19. (currently amended) Access provider according to claim ~~6, 7, or 8~~ 12, wherein five menu-items offer time-dependent information (130), personalized services (110), non-personalized services (120), adjustment of user-dependent information (140) and help (150), in this particular order on said display.

7

20.   (new) Access provider according to claim 13, wherein five menu-items offer time-dependent information (130), personalized services (110), non-personalized services (120), adjustment of user-dependent information (140) and help (150), in this particular order on said display.

5

21.   (new) Access provider according to claim 14, wherein five menu-items offer time-dependent information (130), personalized services (110), non-personalized services (120), adjustment of user-dependent information (140) and help (150), in this particular order on said display.

10

~~11.~~ 22. (previously presented) Method of offering an internet portal comprising a menu comprising menu-items to a mobile terminal and comprising the steps of

- transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least

15   - a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in a server, and

- receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item,

wherein a least some of said menu-items each are linked to at least two sub-menu-items, with

20   said method comprising the step of

- generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part

8

of a sub-menu-item of a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.

5 23. (previously presented) Processor program product to be run via a server for offering an internet portal comprising a menu comprising menu-items to a mobile terminal and comprising

- a transmitting function for transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said

10 server, and

- a receiving function for receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item, wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said processor program product comprising

15 - a generating function for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item of a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least

20 most of said sub-menu-items of said second menu-item being non-personalized.

24.   (previously presented) Mobile terminal (1) for use in combination with a server (7) for

offering an internet portal comprising a menu (100) comprising menu items (110, 120, 130, 140,

150) to said mobile terminal (1) and comprising

- a transmitting module (75) for transmitting a portal signal to said terminal, which portal signal

5   comprises menu-item signals each for displaying at least a part of a menu-item on a display of

said terminal, with said portal signal comprising said menu-item signals being stored in said

server, and

- a receiving module (74) for receiving an activation signal from said terminal for activating a

menu-item, which activation signal comprises a menu-item code defining a menu-item,

10   wherein at least some of said menu-items each are linked to at least two sub-menu-items (111-

115, 121-127, 131-139, 141-146, 151-155), with said server comprising

- a generating module (76) for generating, in response to a first menu-item code, sub-menu-item

signals each for displaying at least a part of a sub-menu-item of a first menu-item on said

display, and for generating, in response to a second menu-item code, sub-menu-item signals each

15   for displaying at least a part of a sub-menu-item of a second menu-item on said display, with at

least most of said sub-menu-items (111-115) of said first menu-item (110) being personalized,

and with at least most of said sub-menu-items (121-127) of said second menu-item (120) being

non-personalized.

20   25.   (previously presented)   Portal signal for offering an internet portal comprising a menu

(100) comprising menu-items (110, 120, 130, 140, 150) via a server (7) comprising

- a transmitting module (75) for transmitting a portal signal to a mobile terminal via said

network-unit, which portal signal comprises menu-item signals each for displaying at least a part

10

of a menu-item on a display of said terminal, with said portal signal comprising said menu-item

signals being stored in said server, and

- a receiving module (74) for receiving an activation signal from said terminal via said network-

unit for activating a menu-item, which activation signal comprises a menu-item code defining a

5   menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items (111-

115, 121-127, 131-139, 141-146, 151-155), with said server comprising

- a generating module (76) for generating, in response to a first menu-item code, sub-menu-item

signals each for displaying at least a part of a sub-menu-item of a first menu-item on said

10   display, and for generating, in response to a second menu-item code, sub-menu-item signals each

for displaying at least a part of a sub-menu-item of a second menu-item on said display, with at

least most of said sub-menu-items (111-115) of said first menu-item (110) being personalized,

and with at least most of said sub-menu-items (121-127) of said second menu-item (120) being

non-personalized.
